ChakraVue AI Product Guide

Medical systems generate enormous amounts of visual, clinical and operational data. ChakraVue AI connects that data to intelligent software layers that help devices understand, assist and respond within the clinical workflow.

This guide describes the ChakraVue AI product suite (four products), its software platforms (three platforms) and its services, as published on the ChakraVue AI website.

Products, Platforms and Services

The ChakraVue AI products are the Surgical Assistant, Slit Lamp Module, AI Powered EMR and Integrated Devices.

The ChakraVue AI software platforms are Dental Implant Planning, ChakraVue Doctor Patient App and ChakraVue Wellness.

The ChakraVue AI services are Biomedical Finite Element Analysis and Tobacco Cessation Programme.

How ChakraVue AI Works

Capture: Imaging and readings are captured at the instrument, in full fidelity, as the examination happens.

Connect: Every device feeds one secure record, so nothing is lost between the instrument and the patient file.

Analyse: Intelligent software reads the data alongside the clinician and surfaces what is clinically relevant.

Assist: Insight returns to the point of care: in the field of view, in the workflow, in the patient history.

Surgical Assistant (Digital Surgical Assistant)

Surgical Assistant is ChakraVue AI product 01: intraoperative visual intelligence.

A surgical assistance system that augments the surgeon’s field of view with real-time visual overlays, guidance, and procedural information while capturing structured data for surgical analysis.

The main parts of the Surgical Assistant are:

- Rugged case
- Surgical display
- AI guidance overlay
- Compute unit

- Keyboard and touchpad
- Ports

Slit Lamp Module

Slit Lamp Module is ChakraVue AI product 02: intelligent ophthalmic examination.

An intelligence module for the slit lamp that captures every examination in high fidelity, highlights clinically relevant findings in real time, and files structured records straight into the patient history.

The main parts of the Slit Lamp Module are:

- Rugged case
- Analysis display
- AI measurement overlay
- Compute unit
- Keyboard and touchpad
- Ports

AI Powered EMR

AI Powered EMR is ChakraVue AI product 03: clinical data and workflow intelligence.

An electronic medical record built around ophthalmic workflows that brings imaging, device output and clinical notes into one timeline, surfacing the insight each consultation needs.

The main parts of the AI Powered EMR are:

- Rugged case
- Patient dashboard
- Patient overview
- Patient details
- Optometry
- Ophthalmic examination
- Compute unit

Integrated Devices

Integrated Devices is ChakraVue AI product 04: legacy equipment, connected.

A connectivity module for the equipment you already own. It captures data from existing devices over a wired or wireless link and routes it into your EMR or EHR in real time, with no replacement hardware and no manual transcription.

The main parts of the Integrated Devices are:

- Enclosure
- Port
- Bluetooth
- Battery
- Power
- Interface

Dental Implant Planning

Dental Implant Planning is ChakraVue AI software platform 05, in the Dental AI & 3D visualisation category.

Patient-specific implant planning. It reconstructs the jaw in 3D, maps the nerve and warns when a planned implant comes too close.

Dental Implant Planning features:

- 3D reconstruction from patient scans
- Slice, panoramic and cross-section views
- Nerve mapping
- Implant library and custom models
- Nerve proximity warnings
- Facial registration and live overlay

The Dental Implant Planning workflow: Scan, then 3D, then Nerve map, then Place implant, then Clearance, then Verify.

Note: Dental Implant Planning is for planning, training and research; not a standalone clinical navigation system.

ChakraVue Doctor Patient App

ChakraVue Doctor Patient App is ChakraVue AI software platform 06, in the EMR ecosystem, Doctors & patients category.

One connected pair of apps: the doctor and the patient each have their own, and the care between visits runs through both.

ChakraVue Doctor App

The doctor's side of the ecosystem: patient information and patient requests on a phone, not just at the desk.

ChakraVue Doctor App features: Patient information, Drug adherence, Submitted test results, Patient call requests, Video consultation.

ChakraVue Patient App

The patient's companion to their care: medicines on time, a direct line to the clinic, and simple eye checks at home.

ChakraVue Patient App features: Medicine reminders, Video call requests, Emergency messaging, Eye redness and itching checks, Amsler grid test, Visual acuity test.

ChakraVue Wellness

ChakraVue Wellness is ChakraVue AI software platform 07, in the Health & wellness category.

Personal health in one place: activity, vitals, rest and mindfulness, connected to the fitness apps people already use.

ChakraVue Wellness features:

- Steps and heart rate
- Stress and mood
- Sleep
- Meditation and yoga
- Fitness app integration
- Offline video and audio

Biomedical Finite Element Analysis (FEA)

Biomedical Finite Element Analysis is a ChakraVue AI service (simulation).

Simulation-driven biomechanical assessment for dental and maxillofacial devices. We show how implants and fixation systems behave under realistic loading, so design decisions are made before physical testing.

Biomedical Finite Element Analysis, what we deliver:

- 3D model preparation, meshing and material assignment
- Realistic loading and boundary conditions
- Stress, strain and displacement analysis
- Comparative studies across design variants and load cases
- Engineering reports with contour plots and interpretation

Case study: Dental implant thread design. Dental implant thread design (thread pitch, bone quality and loading) covers: Multiple thread pitches on one standardised implant; Dense and porous trabecular bone; Axial and oblique loads at varying forces; Crestal bone stress, implant neck stress and micromotion.

Outcome: Which thread designs reduce bone overload and implant stress, and how bone quality and load direction change the answer.

Audience for the Dental implant thread design study: Implant manufacturers, dental R&D teams, researchers.

Case study: Mandibular fracture fixation. Mandibular fracture fixation (plate-and-screw systems under function) covers: Patient-representative mandible with fracture, plate and screws; Physiological boundary conditions at the condyles; Bite forces and muscle loading; Plate, screw and bone stress, interfragmentary motion, optional screw loosening.

Outcome: How load crosses the fracture, where the hardware concentrates stress, and how stable the fixation is.

Audience for the Mandibular fracture fixation study: Maxillofacial device companies, surgeons, validation teams.

Tobacco Cessation Programme

Tobacco Cessation Programme is a ChakraVue AI service (digital care).

A conversational companion for people quitting tobacco. It learns each person's habits, cravings and triggers, and guides them through the journey, remembering what they have already shared.

Tobacco Cessation Programme, inside the programme:

- A structured conversation about usage, past attempts, cravings, triggers and difficulties
- Spoken answers transcribed to text
- Semantic matching that understands meaning, not exact words
- Context carried across the conversation
- Conversation history, saved presets and re-recording

The Tobacco Cessation Programme runs in stages: Assessment, Triggers, Guidance, Support, Progress.

Our Working Principles

Repeatable method: Structured, documented workflows, so every study and deployment can be reproduced and compared.

Clinically relevant: Outputs chosen for the decisions clinicians and device teams actually have to make.

Clear reporting: Reports written for design reviews, regulatory files and research documentation.

Pricing, Demos and Availability

ChakraVue AI does not publish prices on its website. For pricing, a demo or availability of any product, platform or service, contact ChakraVue AI by email at chakravueai@chakravue.ai or by phone on +91 6300147979.

Leadership and Team

Dr. Ajay Chakravarthy: Founder & CEO, ChakraVue AI.

Dr. Chitra Chakravarthy: Co-Founder, ChakraVue AI.

Sumanth Akula: Founding Executive Officer, ChakraVue AI.

N. Sushanth: Technical Strategy Engineer, ChakraVue AI.

Srinidhi Chintaluri: Product Designer, ChakraVue AI.

K. Abhinay Srikanth: Android Architect & Security Engineer, ChakraVue AI.

A. Karthikeya: Business & Marketing Strategist, ChakraVue AI.

Ram Kashyap Isikella: Product Engineer, ChakraVue AI.

Hrushikesh Patki: Mechanical Engineer, ChakraVue AI.
